Software Engineering Intern (Full Stack)

Bengaluru · Work from Office, 5 days a week · 2:00 PM to 10:00 PM

FORBES-RECOGNIZED · ONE OF AMERICA'S BEST STARTUP EMPLOYERS, 2026

This isn't for every computer science student in India. It's for the handful who already build things before anyone asks them to.

Joveo is rewriting the rules of recruitment with AI, and we're hiring one intern, not a batch, who thinks like a founder, moves like a hacker, and builds like an artist. If you've shipped something real, something people actually use, you already know what we're talking about.

This is 0 to 1 work. No playbook. No hand-holding. No ten other interns to hide behind. Just a real product, real users, and your name on the commits.

What you'll build

- Greenfield AI products, from whiteboard sketch to working prototype, in weeks not quarters.
- The full stack, end to end: React and Next.js up front, Node.js and Express underneath, PostgreSQL and Supabase holding it all together.
- LLMs, embeddings, and vector databases (pgvector, we're looking at you) wired into features real users touch every day.
- Gnarly infrastructure problems most interns never get near: load balancing, search optimization, indexing, categorization, at real scale.
- All of it next to our leadership, from week one. No layers. No gatekeepers.

What you bring

- A track record, not a wishlist: real projects you've built and shipped, not a GitHub full of tutorials.
- Real hands-on chops in TypeScript, React, Next.js, Node.js, and Express.js.
- Genuine comfort with PostgreSQL and Supabase: schema design, indexing, query optimization, REST APIs, Git.
- A working grasp of LLMs, embeddings, and vector databases for real retrieval and generation, and the hunger to go deeper fast.
- A builder's mindset that gets a rush from ambiguity instead of running from it.
- Already comfortable in AWS? That's a real edge, and it'll get you noticed.

Why the best candidates want this

- Build from scratch, side by side with our leadership, not buried under them.
- Watch what you build go live in the market and get used by real people, not sit in a sandbox.
- The newest tools in the industry, on day one, not "eventually."
- Full ownership, backed by real support: the freedom to build first-of-its-kind products for the industry, with leadership behind you, not hovering over you.
- Years of growth compressed into one summer, the kind other interns spend years chasing.

Build fast. Own everything. Ship what matters.
